Dispersed System Formalism (DSF)

Draw topological diagrams with DSF

`A tiny Racket experiment`

Primitives

Example: water (w)

Operations

Superposition (σ)

Subscript (h or v) indicates orientation

(σ$_h$ w o s)

Operations

Mixing (:)

Topologically equivalent to mutual disconnection

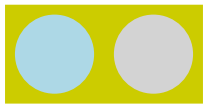
(: o w)

Operations

Inclusion (@)

Bounds a system in a container (capitalised symbol)

```
(@ (: g w) 0)
```

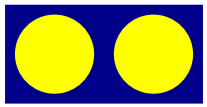


Operations

Inclusion (@)

Dispersion is inclusion (a bounded multiplicity)

```
(@ (: o o) W)
```



Containers (simple)

Example: solid (S)

```
(@ w S)
```

Containers (nested)

```
(@ (@ w S) W)
```

Tree representation

Define the tree

```
(define complex-tree
  '(@ (: w o) s))
```

Tree representation

Draw the tree

```
(draw-tree complex-tree)
```
